Recently, I picked up the latest version of Photoshop and was very impressed with the amount of content and how easy to use it is. It is difficult to find a major flaw and I have enjoyed using Photoshop in version 2019, 2020, and now 2021. I have already used the software for many years and consistently used Photoshop with one exception. I use Photoshop Elements with Photoshop, so I was missing the effects that are available in the program. The program also has some features not found in Elements, like the powerful eyedroppers and variations in the basic shapes. I went back to Elements after trying Photoshop. When I am ready to do my 350×600 billboard, I will be returning to Photoshop. Thanks for providing these files to us - I don't know how you do it, but it is so impressive to me. Love it. I have been a fan of Photoshop since the original version back in 1992. The updates and fixes and the new features have always made the program more efficient and easier to use. The 2019 update had a lot of enhancements to its healing engine and some other tools. For those that have been using Photoshop for years you know the products are meant to run automatically. Considering you can make those adjustments the first time you open them, you would think they would be a bit easier to learn. Working on computers has changed since it quickly became the means to make art, and that's as true today as it was in the 1970s, when you needed \$60,000 and a dedicated studio and a whole workforce of employees who each knew two different versions of the retouching software from the 1970s. From the first time I used Photoshop, in June 2001, I was mesmerized by the power of its tools. A lot has changed since then. Printing photos now happens through tablets and smart phones, and managing how users organize and access their photos has been usurped by the cloud. We are living in an era of apps that make a product popular, and not just for the production of art.
